

# AMAZON: Amazon Interface

## Overview

This extension allows you to import Amazon order data into Gestan invoices.

## Settings

Settings can be configured via the Tools → Application Settings → Add-on Settings menu.

The screenshot shows a settings window titled 'Additional parameters' for the 'Extension AMAZON'. The window has a header bar with the extension name and version '3.A1.09.00'. Below the header, there is a section 'Select the product families that will be used by default for importing'. This section contains two dropdown menus: 'Products' set to 'Fruits' and 'Transport / Shipping' set to 'Port'. To the right of these are two checked checkboxes: 'Correspondence file' and 'Mention GBR VAT exemption'. Below this is a section 'Setting VAT rates' with a 'Country' dropdown set to 'FRANCE' and a 'VAT' input field set to '20,00'. At the bottom right, there are two buttons: 'Confirm' with a checkmark and 'Close' with an 'X'.

This screen allows you to select the default product categories for the import. The first is used for products and the second for any transport and delivery charges.
