

AMAZON: Amazon Interface

Overview

This extension allows you to import Amazon order data into Gestan invoices.

Settings

Settings can be configured via the Tools → Application Settings → Add-on Settings menu.

The screenshot shows a settings window titled 'Extension AMAZON' with a version number '3.A1.09.00' in the top right corner. The window is divided into several sections:

- Select the product families that will be used by default for importing:**
 - Products:** A dropdown menu currently showing 'Fruits'.
 - Transport / Shipping:** A dropdown menu currently showing 'Port'.
- Setting VAT rates:**
 - Country:** A dropdown menu currently showing 'FRANCE'.
 - VAT:** A text input field currently showing '20,00'.
- Checkboxes:**
 - ☒ Correspondence file
 - ☒ Mention GBR VAT exemption

At the bottom right, there are two buttons: 'Confirm' with a checkmark icon and 'Close' with an 'X' icon.

This screen allows you to select the default product categories for the import. The first is used for products and the second for any transport and delivery charges.

Usage

Access: Business → Import Amazon

Import Amazon invoices

Import Amazon invoices

Stock alerts

Mapping

Id	Order no.	Buyer's name	Recipient name	D	Delivery instructions	Payer's name	Tel. buyer	Buyer's address 1	Buyer's address 2

Product code	Product name	Quantity	Price excl.	VAT amount	Price incl. VAT	%VAT

Integrate

Close

The 1 button allows you to select the file to be processed, and the **Import** button triggers the processing.

 If a town is not found in the postcode file, it is automatically added. Please remember to check that the information is correct before importing the data.

 If the products in the file support stock management, stock movements are automatically created. Any stock alerts will be displayed in the **Stock Alerts** tab.

Integrate ✓ Close ✕

 Some alphabets may not be recognised by the extension. The relevant row will then be displayed in red and the relevant columns will show “Unrecognised characters”. You can edit these elements directly in the table before importing the data.

If the **Mapping file** box is ticked in the settings, a mapping file for Amazon and Gestan product codes can be uploaded.
