

EBAY: eBay Interface

Overview

This extension allows you to import eBay order data into Gestan invoices.

Configuration

Configuration is carried out via the Tools → Application Settings → Extension Settings menu.

Additional parameters

Extension EBAY

3.A1.09.00

Setting VAT rates

Country VAT 

Select the product families that will be used by default for importing

Products

Transport / Shipping

This screen allows you to select the default product families for the import. The first is used for products and the second for any transport and delivery charges.

You can also adjust the various VAT rates according to your business and location. The 1 button allows you to save any changes.

Usage

Access: Business → Import eBay

Source file 1 Separator ; 2 Load

Import Stock alerts

Id	Sales no.	Order no.	Buyer's name	Recipient name	Recipient first name	D	Message from the buyer	Buyer's address 1	Buyer's address 2

Product code	Product name	Quantity	Sale amount	%VAT

Integrate Close

The 1 button allows you to select the file to be processed, whilst the 2 drop-down menu allows you to specify the separator used in the file to be processed.

The **Import** button triggers the processing.

 If a town is not found in the postcode file, it is automatically added to it. Please remember to check that the information is correct before importing the data.

 If the products in the file support stock management, stock movements are automatically created. Any stock alerts will be displayed in the **Stock Alerts** tab.

[illegible]

 Some alphabets may not be recognised by the extension. The relevant row will then be displayed in red and the relevant columns will show “Unrecognised characters”. You can edit these elements directly in the table before importing the data.

Input file format

The input file must be a CSV (or text) file with a delimiter (TAB, comma, semicolon or any other character). This is an export file generated from eBay.

 Some columns in the file will not be used during processing.

1	2	4	6	7
8	9			
SALE NUMBER ORDER NUMBER BUYER'S NAME BUYER'S MESSAGE BUYER'S				
ADDRESS 1 BUYER'S ADDRESS 2 BUYER'S TOWN				
10		11	12	15
16	17			
BUYER'S REGION/STATE BUYER'S POSTCODE BUYER'S COUNTRY RECIPIENT'S NAME				
RECIPIENT'S TEL RECIPIENT'S ADDRESS 1				
18		19	20	21
22	24			
RECIPIENT'S ADDRESS 2 DELIVERY TOWN DELIVERY REGION/STATE DELIVERY				
POST CODE DELIVERY COUNTRY ITEM DESCRIPTION				
25	27	28	29	40

50	53	54		
DESCRIPTION	QUANTITY	SELLING PRICE	DELIVERY/SHIPPING COST	eBay Tax
TOTAL PRICE	SALE DATE	PAYMENT DATE		
63				
DELIVERY SERVICE				

In the case of an eBay order containing several items, the first line contains the general order details:

- Buyer and delivery details
- The total quantity of items
- The total sale amount (in the 'Sale price' column)
- The total amount, dates and delivery service

This line is followed by several product lines. These contain only product details (quantity, sale price, product title and description) and the sale and order numbers (which are identical to those on the first line).

Versions

Version	Date	Comments
3.A1.09.00	12/08/26	Adaptation for Gestan A1.09.01
3.A1.08.02	14/03/25	Migration to A1 format
3.15.46.02	14/03/25	First beta version
3.15.46.01	12/03/25	First alpha version
