

Tips and tricks

Fix Me! A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the [forum](#).

Here are some tips and tricks valid for most Gestan screens.

Show/hide table columns

Clicking on the pictogram located at the top left of the tables allows you to select the columns that you wish to display, or not.

For example, here click 1 to bring up the table context menu, then click 2 to not display the ID column.

Hover help

Most of GESTAN's buttons have explicit wording that makes them easy to understand. For some others, less obvious, just hover the mouse over it, displaying the corresponding help bubble.

?

Clicking on header 1 of a table column sorts the table according to the column. The presence of a small magnifying glass 2 allows you to search the table.

Note that this does not work on all tables, because some tables are directly connected to the files. This only works on tables powered by programming.

But it is possible to go even further.

In this example, the column header has opened and allows a direct search by typing the requested value. And the context menu of the small magnifying glass allows you either to specify a direct filter, or to specify an elaborate filter, such as "Contains the channel".
