

Customizable labels

 **Fix Me!** AI proofreading not yet effective for this page. In the meantime, you can ask any questions on the [forum](#).

This screen is used to code all the “generic labels” that can be used by Gestan.

It is thus possible to set :

- a contact type
- a machine type
- a project type
- a project contact role
- and many more!...

Using the screen

Access: via Tools→Administration→Customizable labels

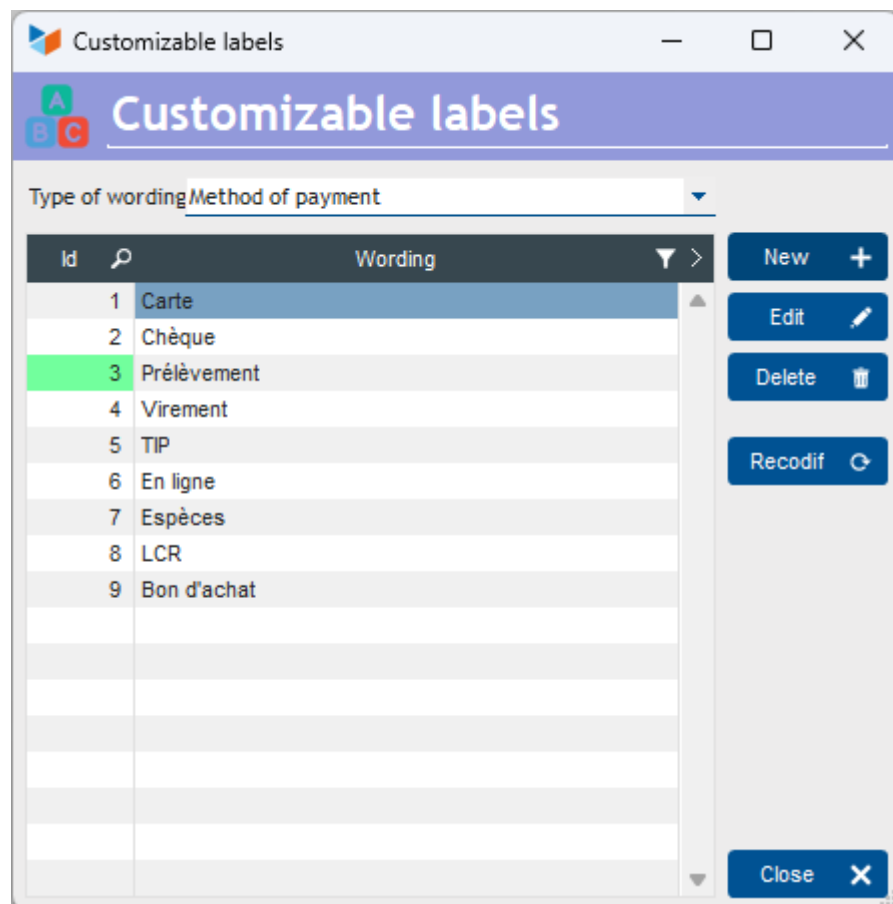

For example, set a few contact types, then go to the contact form.

[illegible]

The contact form will display a combo allowing you to enter the type of contact you've defined in the customizable labels screen.

The **Recode** button allows you to change the code in all records concerned, or to delete it. For example, this allows you to re-code as *“Wrong gender”* all contacts of gender *“Preppy gender”*, or to reset to *“Undefined”* all contacts of gender *“Good gender”*.

Special feature: payment method

For “Payment method” labels, the functional meaning of the label cannot be modified, for labels with IDs 1 to 9.

For example, the ID 2 label will always be “Check” (inducing a request for the check number during entry), even if you call it “Card” (a toast indicates this when you modify it).
