

libcef.dll file not found

 **Fix Me!** A1 proofreading not yet effective for this page. In the meantime, you can ask any questions on the [forum](#).

Since version 15.37 of Gestan, compiled under Windev 27 (currently version 28), a problem occurs when you open the vehicle or address geolocation screen, reporting an error when loading the chromium framework due to the absence of the libcef.dll file.

This problem is due to the Windev 28 program installer, which does not include all the necessary resources. Until PCSoft finds an elegant and automatic solution, please perform the following operations:

Erreur lors du chargement du framework chromium.
C:\Program Files (x86)\Common Files\PC SOFT\27.0\Framework\wd270web\libcef.dll
Le module spécifié est introuvable.

To correct this problem:

- download the zip archive: <https://www.gestan.fr/downloads/V15/wd280web.zip> and unzip it.
- Put its contents in the directory C:\Program Files (x86)\Common Files\PC SOFT\28.0\Framework\wd280web (create this directory if it doesn't exist)

and that's all!
